

CORR-DEFENSE

SERVICE PORTFOLIO

- Campers and industrial equipment rental
- Field Personnel and PPE Supply
- Civil Projects
- Preventive/Corrective Maintenance
- Industrial Radiography
- Equipment Supply
- Technology Services

Rental of campers and industrial equipment

Rental of campers and industrial equipment

Supply

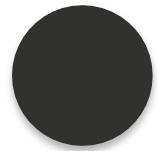

General Laborers and Personnel Management

Union Dues Payments, Access, and/or Support at Locations

Drilling Tools and Equipment

Campers

Supply of all oil field equipment

CORR-DEFENSE

- Treatment of soil contaminated by hydrocarbons.
- Various services for the oil industry.

CORR-DEFENSE

- Preventive/Corrective Maintenance (Sand Blast)
- Special Paintings in UDC
- Stress Relief

Control Units

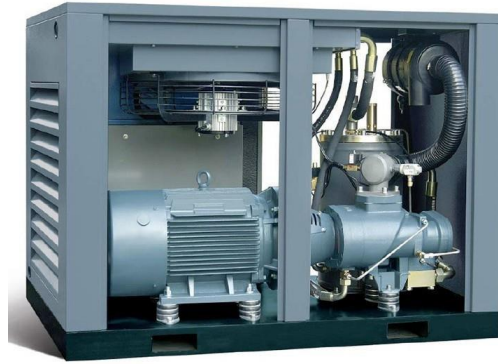

- Graphic and alphanumeric survey of control units.
- Industrial radiography.
- Hardness testing.

CORR-DEFENSE

- Maintenance and repair of electrical equipment and valves.
- Equipment and machinery rental.
- Box inspection (RAM-100).

- Compressor booths.
- Maintenance personnel booths.
- Tanks of various sizes.
- Cages for Production tree protection.
Containers.
- Barite silos with a capacity of up to 80 tons.
- Frac tanks of various capacities.
- Centrifugal pumps.

Cleaning service

CORR-DEFENSE offers cleaning services and essential accessories for living quarters, mobile offices, and operational bases.

 **CORR-DEFENSE**

Supply of PPE

Civil and electromechanical works

CORR-DEFENSE specializes in undertaking construction projects, including foundation works, road rehabilitation, earthworks, paving, and structural construction. Additionally, we provide comprehensive maintenance services for mechanical, hydraulic, and electrical systems, catering to both public and private sectors.

CORR-DEFENSE

Membrane cleaning

CORR-DEFENSE provides cleaning services for membranes contaminated with petroleum fluids.

Manufacturing of membranes

CORR-DEFENSE offers supply services for containment membranes designed for use with chemicals, oils, fuels, and other substances, effectively preventing spills that may lead to environmental damage.

CORR-DEFENSE provides comprehensive services encompassing the supply, installation, and repair of spill containment membranes.

Dam Washing

CORR-DEFENSE recognizes the intricate nature of managing oily residues within confined spaces and explosive zones. That's why our personnel undergo continuous training to execute these tasks with a focus on risk management. By doing so, we substantially minimize the likelihood of unforeseen events that could jeopardize the safety of personnel, facilities, and the environment.

Final cleaning of counter pits

Following the completion of oil drilling operations, CORR-DEFENSE offers extensive cleaning services for the surrounding area. This process includes authorized final disposal of residues located inside the sump and counter pit. Moreover, any areas potentially contaminated due to accidental spills are meticulously addressed. Soil scraping can be conducted manually or mechanically, with the contaminated soil transported for proper disposal. The production tree undergoes pressure washing, with residual water from the washing process efficiently removed. To complete the cleaning process, lime treatment is applied to the sump and counter pit.

Ground Protection

Health, Safety, and Environment (HSE)

Our Right-of-Way Clearance Services

- Restoring the layout alignment.
- Defining the land required for the construction of the right-of-way bypass and its safety zone.
- Registering affected assets.
- Compiling files with documentation verifying ownership, compliant with prevailing regulations.
- Providing technical descriptions of geographical areas earmarked for the right-of-way, including individual plans for each affected area.
- Crafting proposals for land expropriation necessary for the construction of the right-of-way bypass.

Our Right-of-Way Clearance Services

- Organization of meetings with the agrarian communities affected by the layout of the right-of-way bypass, along with the corresponding registration documentation.
- Supply of periodic reports reflecting the status of the right-of-way clearance process.
- Preparation of all documentation related to payments, property agreements, and transactions, among others.
- Preparation of necessary documentation for procedures before INDAABIN, SEDATU, SRA, SEMARNAT, Civil Protection, and other relevant entities.
- Management of required documentation in the various areas involved in the project.

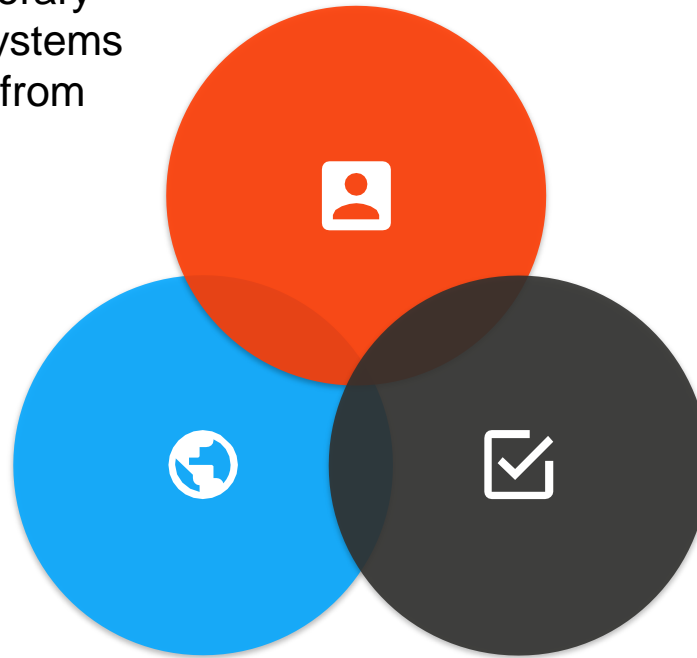

Mission:

To meet the needs of our clients with profitable spaces, exceeding their expectations and providing integrated services in the design, development, and construction of their projects, using cutting-edge technology, contemporary materials, and innovative construction systems so that the user obtains the best benefit from their investment.

Vision:

To grow as a leading construction company in design, construction, and services in the USA, constantly evolving to offer the best quality and costs in equipment supply and services.

Objectives:

1. To adapt to the needs of our clients in all aspects related to quality and design, constantly developing new solutions to meet the changing needs of the market.
2. To provide efficient and high-quality services.
3. To maintain control over the organization's processes to improve them.
4. To implement training plans that allow for the development of personnel and, at the same time, improve the quality of services provided.
5. To care for and protect the environment in each of the designs and projects we undertake.
6. To maintain a proactive road safety culture among all members of our company so that they can adopt it as a way of life.
